

HYGIENE WORKING PLATFORM

Elevating staff.
Ergonomic design.

Customisable, ergonomic working platform

The Hygiene working platform is ideal when operators need an elevated position.

The platform is constructed in our Hygiene Design which makes it easy to clean and which minimises the level of bacteria in the working environment.

The foot pedal enables the operator to elevate the platform. Using the foot pedal instead of hand operated adjustments, bacteria will not be transmitted from the floor to the products.

The platform is ergonomic to use for the operator because of the foot pedal and the standing plate which has a built-in shock absorber.

The working platform can be customised according to need.

Technical specifications

| | |
|--------------------|-------------------|
| Maximum load | 250 kg* |
| Height adjustment | 180 mm to 430 mm* |
| Materials | Stainless steel |
